

Font Sampler

字体混排样本

This page mixes four font faces: a bold sans-serif title, a serif CJK body, a monospace code listing, and regular sans-serif paragraphs like this one. Each visual line keeps exactly one font; the reading order rule is unaffected by font changes, because a line's font never changes its x position or its band.

本页混合四种字体粗体无衬线标题衬线中文正文等宽代码与常规无衬线段落。
每个视觉行只使用一种字体字体切换不改变行与栏的阅读顺序规则因为字体从不改变一行的横坐标与栏带归属。

Section headings in a second font

小节标题使用第二字体粗体渲染标题字号大于正文解析器不应把字号差异当作内容边界只有换行符决定行边界字号只是字形属性。

Typographically, a bold heading carries weight without growing in point size; a size jump changes rhythm instead. The sampler deliberately shows both: bold at constant size, and regular at increased size, in the next section.

中文小节标题

中文小节标题用宋体渲染字号同样大于正文到此为止页面已经出现三种字号的文本主标题小节正文选区与摘录不感知字号只感知文本与位置。

同一行内的混排被有意避免中文与西文分处不同的行各自使用一种字体这让“一行一个韵规范保持简单也让提取器的解码路径单一可靠。

Code in Courier

```
const sampler = { faces: 4, rule: "one font per line" };
console.log(sampler.faces); // 4
for (const face of ["bold", "serif", "mono", "sans"]) {
  console.log(face.padEnd(8), sampler.rule);
}
```

等宽字体行保持原有缩进语义行首空格是内容的一部分不会被折叠代码行与正文行共享同一套栏带规则。

混体混排到此收尾四种字体三种字号两种书写系统同一套阅读顺序规则全部适用若选区在任何一行上失准问题不会出在字体上去

查偏移数学。

Final paragraph in regular sans: font variety is a rendering concern, not a text concern. The canonical text records characters, not faces; a highlight spans glyphs the parser never measured. Goodbye from the sampler.
